Listing of Claims:

Claim 1 (currently amended)

An optical apparatus, comprising:

- a) an input port, providing a multi-wavelength optical signal;
- b) a wavelength-disperser that separates said multi-wavelength optical signal by wavelength into multiple spectral channels having a predetermined relative arrangement;
- c) an array of beam-manipulating elements positioned to correspond with said spectral channels; and
- d) an array of optical detectors, including a plurality of optical detectors each corresponding to a unique one of said spectral channels;

wherein said beam-manipulating elements are individually controllable, so as to be capable of directing said spectral channels into said array of optical detectors concurrently and capable of directing spectral channels into said array of optical detectors in a time-division-multiplexed sequence.

Claim 2 (original)

The optical apparatus of claim 1 wherein said beam-manipulating elements comprise micromirrors.

Claim 3 (original)

The optical apparatus of claim 2 wherein said micromirrors comprise silicon micromachined mirrors.
